TASK - 7
## Browser Extension Security Check Report

Objective:
To spot and remove potentially harmful browser extensions.

Tools Used:
Web Browser (Brave - Chromium-based)

Extension Reviews:
1. Return YouTube Dislike

• Description: Returns ability to see dislikes on YouTube.
• Version: 3.0.0.18
• Size: < 1 MB
• Permissions: Read and change data on *.youtube.com/*
• Review: This is a widely used open-source extension that restores the dislike count feature on YouTube. Its permissions are justifiable for its intended function. No known malicious behavior.
• Action Taken: Kept.
• Recommendation: Safe to use. Monitor occasionally for performance or privacy issues.

2. Ultimate Car Driving Game
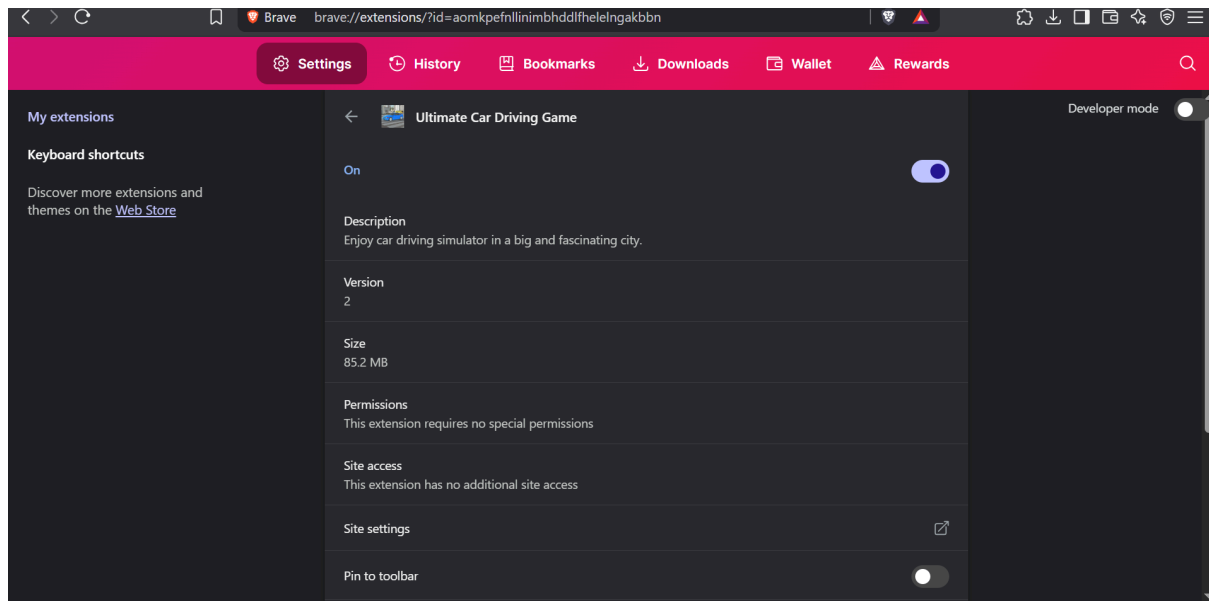

• Description: Car driving simulator game played directly in the browser.
• Version: 2
• Size: 85.2 MB
• Permissions: No special permissions required
• Site Access: None
• Review: While it requests no special access, its large size (85.2 MB) is highly unusual for a browser extension. This raises questions about performance, storage, and necessity. Game-based extensions are also not typically recommended for security-conscious environments.
• Action Taken: Kept (for now).
• Recommendation: Investigate the source. Consider removing if unused or if browser performance is affected.

General Recommendations:
- Regularly review all installed browser extensions.
- Avoid extensions with vague descriptions or high storage usage without clear purpose.
- Always check reviews, ratings, and permission requests.
- Remove any extension you no longer use.
- Prefer open-source and widely reviewed extensions.

Summary:
Two extensions were found during the browser security check. 'Return YouTube Dislike' is safe and serves a clear purpose. 'Ultimate Car Driving Game' appears safe but is unusually large, and should be kept only if actively used. No malicious extensions were detected, and no removals were necessary at this time.
